

Front-end Developer Test

This test is designed to rate the quality of front-end development skills and what we will need at Milo Credit. We are assessing your strengths using front-end tools and your creativity. We will require that you use SASS such as CSS preprocessor, *Story Books* for documentation, *Jest* for tests, and *Redux-Saga* to Redux. You are welcome to add any other tech you want.

For this test concept you should use this free API <https://rickandmortyapi.com>¹. The objective is to build a SPA where it can list characters. Additionally, when you click each character it should show you something about it in “another page” but you could also select multiple characters and show more about them in a different page (or both in the same page).

Also, you should be able to search for a character in a field and you could access it by going to the url.

Please do not copy code from another repository. The goal is to test your skill.

Good luck!

Milo Technology Team

¹ This API support many techs like as GraphQL and Rest
